DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 – 19, 28 and 29, drawn to subcombination of encrypting the multi-factor authentication data, classified in class 713, subclass 182.
 - II. Claims 20 – 22, drawn to subcombination of bilaterally authenticating a subsystem and the requestor, classified in class 713, subclass 169.
 - III. Claims 23 – 27, drawn to subcombination of using platform configuration register to authenticate the requestor, classified in class 713, subclass 187.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as encrypting the multi-factor authentication data, and no mention of bilaterally authenticating the system and the sub-system, or using platform configuration registers.. Subcombination II has separate utility such as bilaterally authenticating the system and the sub-system, and no mention of encrypting the multi-factor authentication data, or using platform configuration registers. Subcombination III has separate utility such as the sub-system using platform configuration registers to

Art Unit: 2109

authenticate the system, and no mention of encrypting the multi-factor authentication data or bilateral authentication. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claims depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. A telephone call was made to Crystal Sayles on April 11, 2007 to request an oral election to the above restriction requirement, but did not result in an election being made.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cordelia Kane whose telephone number is 571-272-7771. The examiner can normally be reached on Monday - Thursday 8:00 - 5:00 EST.
